

Test Correction Directions

Test corrections are completed in 5 parts for each question

1. (question number) rewrite the question
2. Write the letter of your answer and the answer
3. Write the letter of the correct answer and the answer
4. Write the reason you got the problem wrong - be specific
5. Write the reason that the correct answer is the better choice; again be specific

Below is an example

1. (23) Which of the following can be classified as a compound?
2. I chose (B) concrete
3. The correct answer is (C) Water
4. I mixed up the concept of mixture and compound
5. I know that water is a compound because it is three atoms bonded together; 2 Hydrogen atoms and 1 oxygen atom. Concrete is a mixture because you can see the individual components and they are physically combined, not chemically combined.

These test corrections must be completed before the date of the retest on the date specified by your teacher.
